FEATURES

For commercial HVAC applications where dirt load is high and cleanability is critical, Model PF, the newest addition to the PreVent system product line, outperforms metal mesh filters as a permanent and reusable type air filtration solution. Model PF is durably designed for high-velocity air flow, excessive moisture and high dirt loads, providing a top-of-the-line prefilter to meet even the most challenging fresh air intake application demands.

Model PREVENT-PF filter is constructed of 2 layers of washable three-dimensional electrostatic polypropylene BHC media with wire support, encased in a 1" or 2" thick galvanized steel frame.

PRODUCT DETAILS

- Low 0.06" w.g. resistance to air flow
- Fits existing filter rack systems
- Front panel contains electrostatic media with expanded metal support
- Back panel contains heavy duty expanded metal for rigid support
- UV protected for outdoor use
- Strategically placed drainage holes and smooth surface media fibers make it easy to clean
- Clean as needed, rinse with water, brush off or vacuum
- UL Classified as to Flammability Only
- 5 Year Warranty
