

Honeywell Air Flow Switch 4074ETH 4074EZB

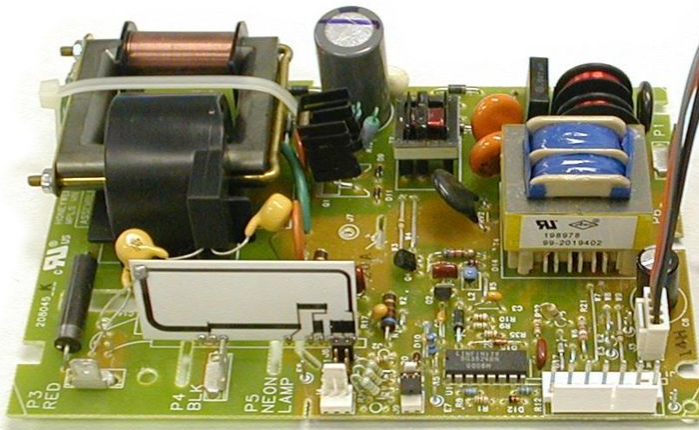

If Replacing an Existing Air Flow Switch

The 4074ETH replacement air flow switch is compatible with both Series 1 and 2 power supplies. But if you have a series 2 power supply because your unit was built after 1997 or has a replacement power supply made after 1997 then the use the Series 2 4074EZB AFS. The Series 2 AFS has plug and play install.

4074EZB with Molex Connector has Simple Install

Photo below shows the 4074EZB air flow switch simply plugs in and mistake proof.

Series 2 Power Supply

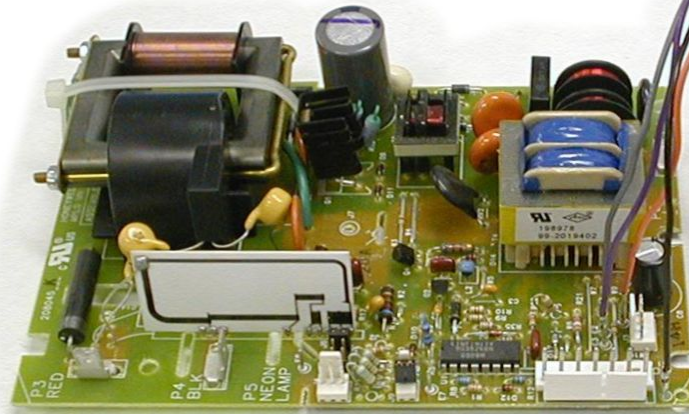

Series 2 Air Flow Switch 4074EZB

Original 4074ETH has Individual Post Connectors

The 4074ETH replacement air flow switch is compatible with both Series 1 and 2 power supplies. Shown below is the 4074ETH with the individual connectors connecting to a Series 2 power supply. See the [Figure 4 schematic](#) for connection details. If you have the Series 2 power supply and now replacing the AFS it is recommended not to use the 4074ETH, but use the simpler 4074EZB.

Series 2 Power Supply

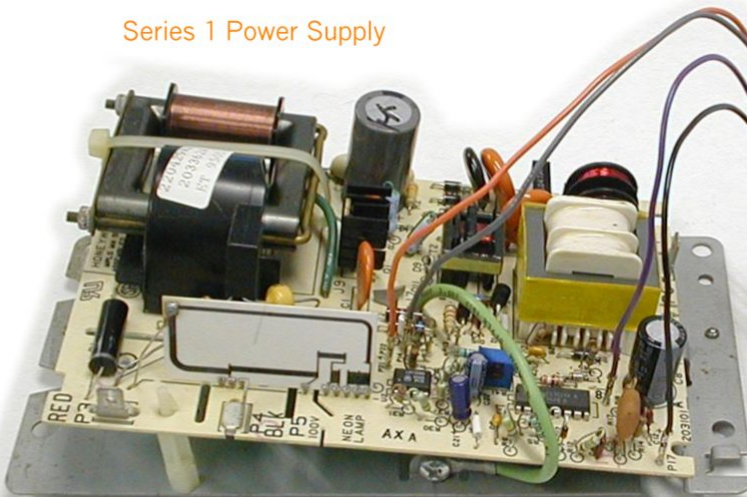

Series 1 Air Flow Switch 4074ETH

Series One Power Supplies Require The 4074ETH

Shown below is a Series 1 power supply. The Series 1 was prior to the Modular connector and thus only has the post connectors. If you have a Series 1 power supply and replacing the AFS then the 4074ETH is needed. See the [Figure 3 schematic](#) for connection details.
