

Honeywell Power Supply F50 F300 Evolution

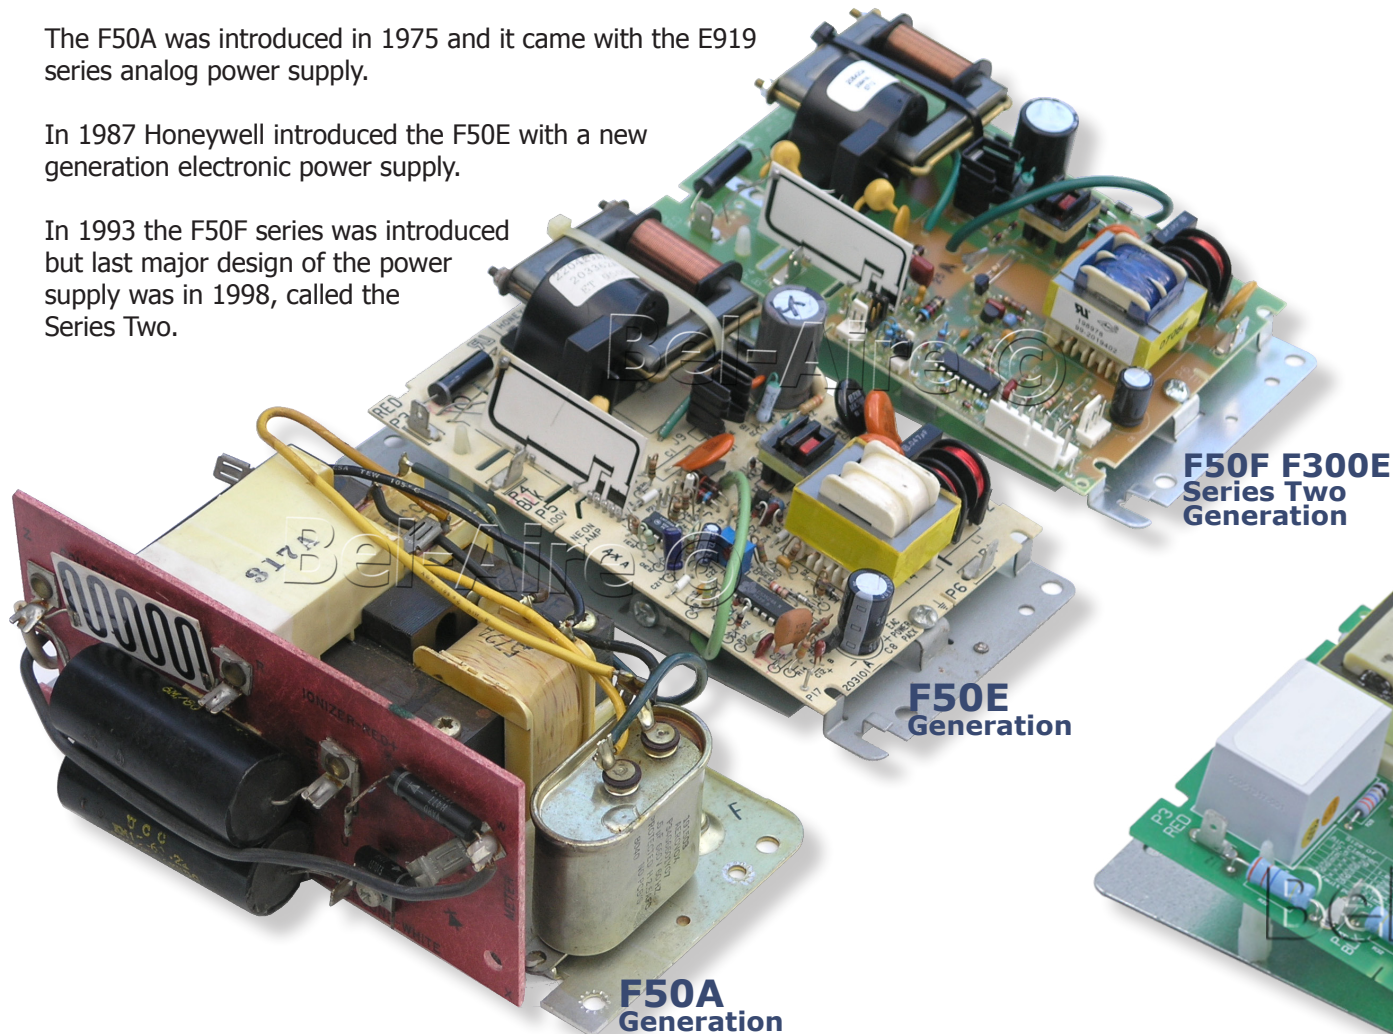

The F50A was introduced in 1975 and it came with the E919 series analog power supply.

In 1987 Honeywell introduced the F50E with a new generation electronic power supply.

In 1993 the F50F series was introduced but last major design of the power supply was in 1998, called the Series Two.

In 2012 Honeywell radically redesigned their power supply. They are very flexible and universal for multiple applications.

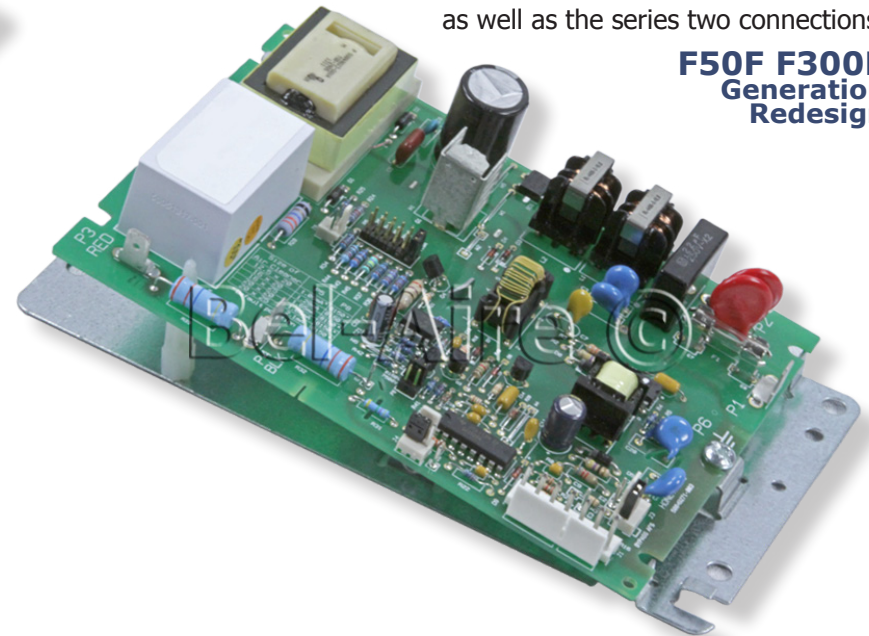

This major design seems to have better power surge protection along with ground loop frequency insulator. Also this design have the series one LED + AFS connection as well as the series two connections.
