

UV Light

In some homes, comfort comes with side effects, especially during warmer times of the year. Many people find that when they use their air conditioning systems, allergies, headaches and cold symptoms seem to worsen. Unfortunately, air conditioning coils are dark and damp, offering the perfect environment for the growth of harmful bacteria, fungi and molds. So in establishing a comfortable temperature, homeowners can unwittingly create unhealthy air. The White-Rodgers UV Light is a remarkably effective means of arresting the growth of bacteria, fungi and molds. The unit emits a germicidal ultraviolet frequency that penetrates the cell walls of detrimental microbes, permanently neutralizing any ill effects. And better health isn't the sole benefit. When

mold or similar microbes have been reduced, air conditioner efficiency often improves, saving you money.

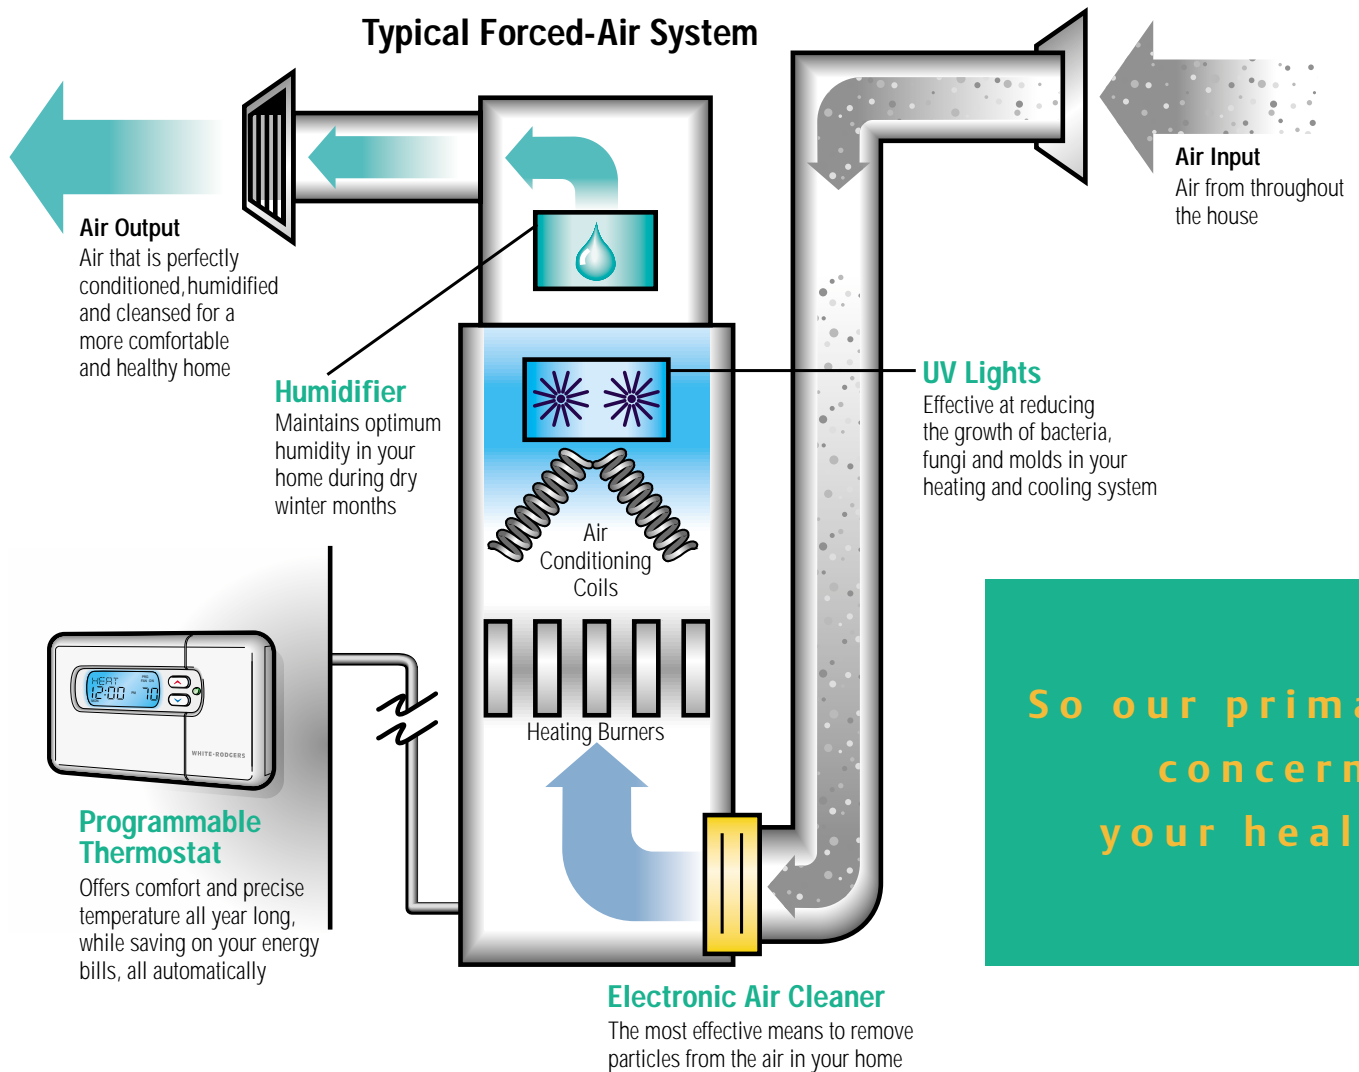

- **UV100** The UV100 single lamp emits light at the optimum light frequency to combat the bacteria that commonly infest heating and cooling systems. Placed directly above the unit's coils, the UV100 halts existing growth and prevents recurrence.
- **UV200** In homes that place higher demands on air conditioning units, the UV200 dual lamp offers double the intensity – and twice the power to neutralize small disease-causing microorganisms. And because this unit features increased area coverage, it's a smart choice for homes and businesses that employ larger heating and cooling systems.

Comfort Complete.

White-Rodgers premium home comfort components all have their individual merits, but it's the system as a whole that creates **environmental perfection**. Temperature and humidity, of course, are easy to appreciate because our bodies are very much attuned to these environmental conditions. Judging the quality of the air we breathe, however, requires substantially more sensitive equipment, and in most cases, people simply aren't aware that the air in their homes is unhealthy. With that in mind, White-Rodgers has designed the comprehensive **ComfortPlus™ system**, in which different technologies combine to create ideal climatic conditions. After all, comfort is really just part of being **healthy**.

So our primary concern is your health.
